

ITECH3209 – Project 2

Sprint 3 – Deliverables (Individual Report)

Student Name: - Hetkumar Umeshbhai Patel

Student ID: - 30391427

As part of this particular individual document, basically this includes the individual progress and contribution till sprint 3 development. I play two major roles in the development phase of the product so according to that, I have attached some of the screenshots in this document.

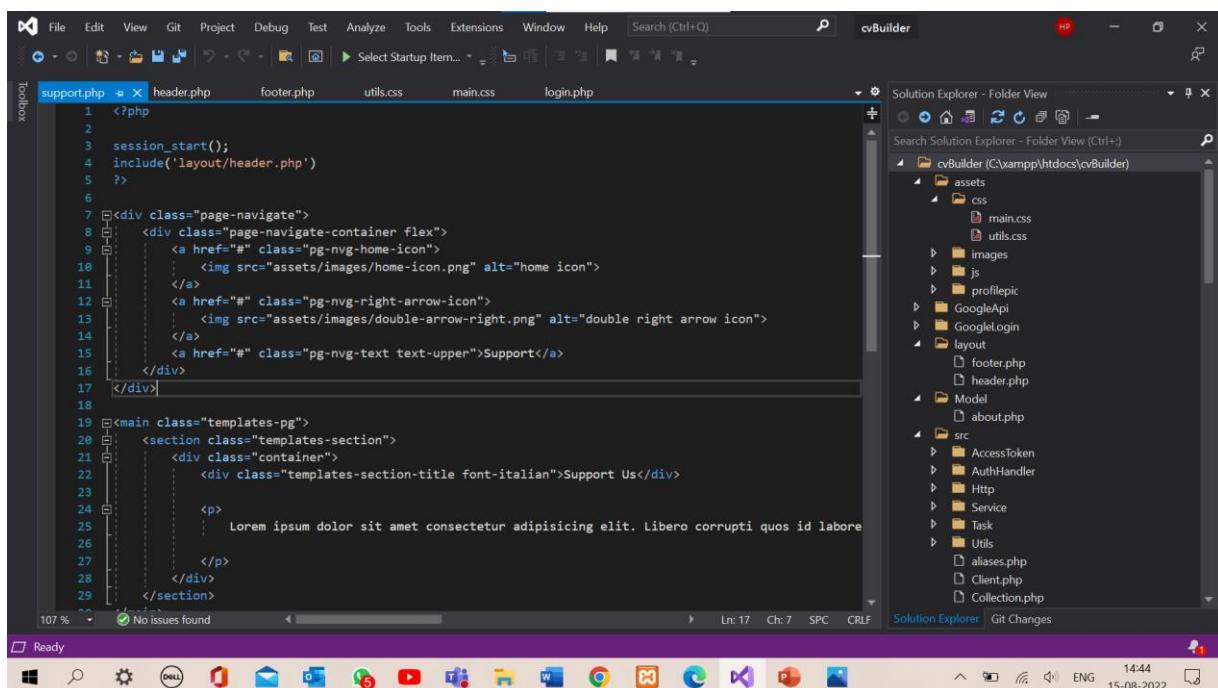

I am doing the tasks of web tester and front-end developer for building sprint 3 in accordance with my roles as operational manager and web tester. To test the codes, however, I use validator.w3, which is where I discovered that the coding testing took place.

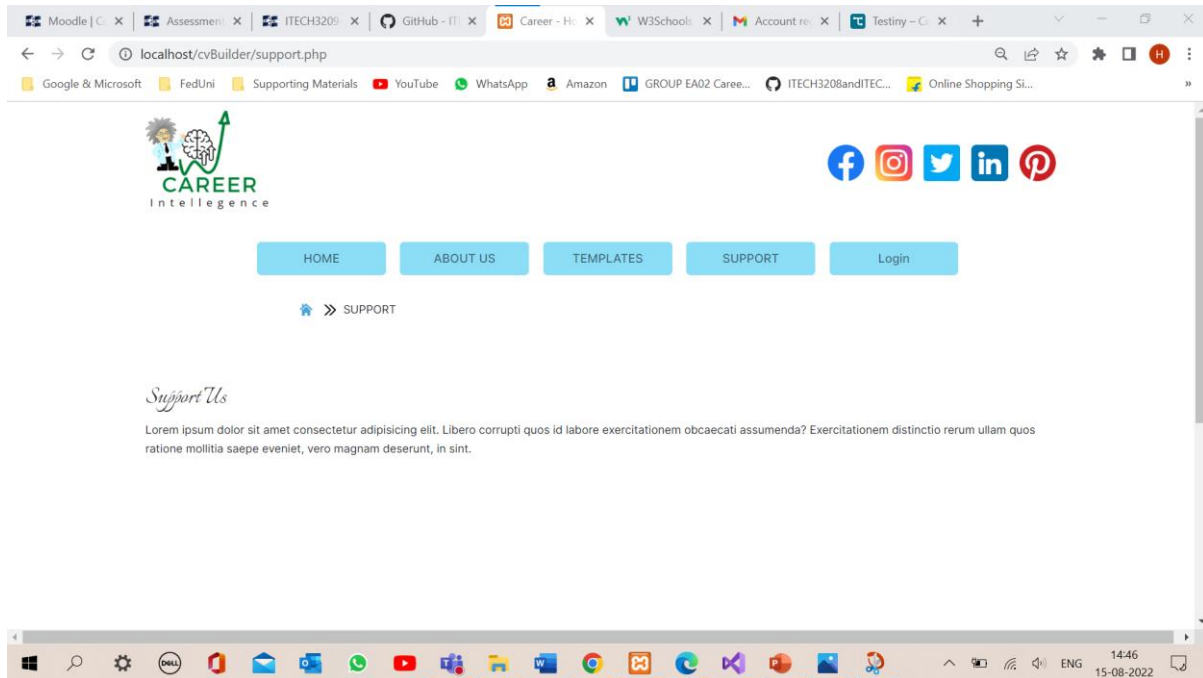

When I tested the about and index pages, I discovered a few errors that the back-end developer helped me to fix. Additionally, I have tested files like the profile page, about page, index page, utils.css, main.css, etc. as a web tester. I worked closely with the group's stakeholders and team members.

Additionally, the customer and I thought of changing the page's interface in some way. likewise confirming data before sending it to the members of the back-end team. A few significant mistakes have been fixed as the customer advised after receiving feedback from him. Furthermore, I attended every meeting that we have done with our client till now.

Support Us Page

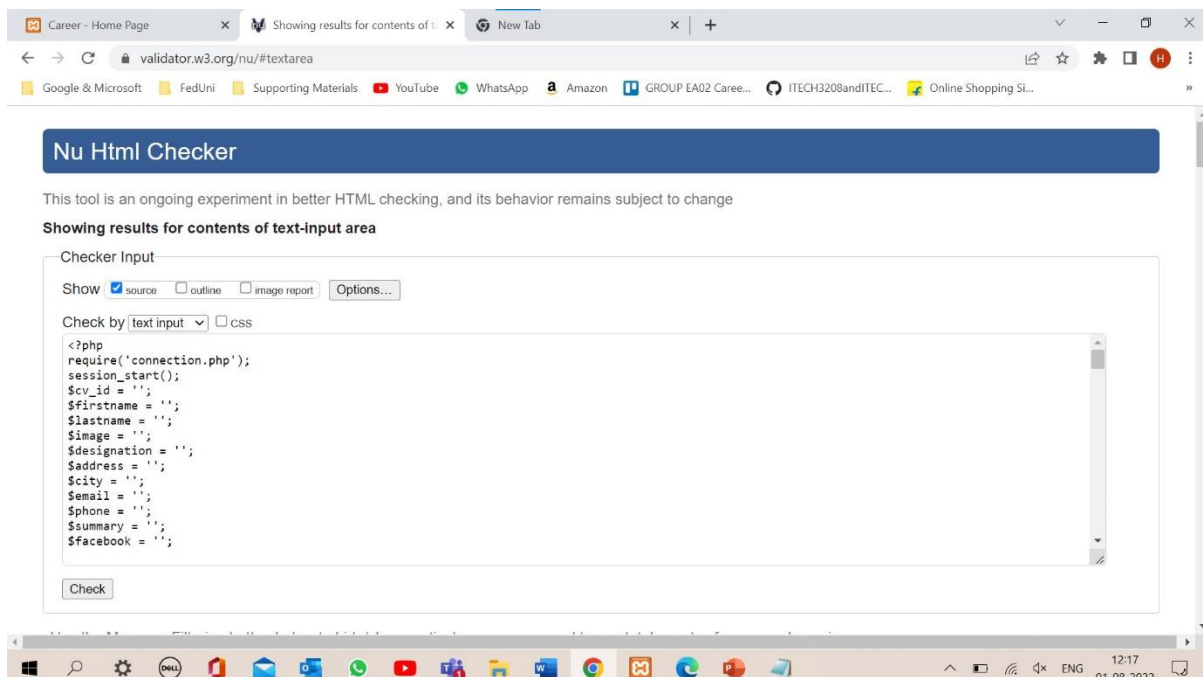

I worked on the support us page's design as a front-end developer. Code of the support us page was possible with the help of online resources (such as w3 schools), team members and YouTube videos. Additionally, it is demonstrated in the screenshots (code and the final appearance) that follow:

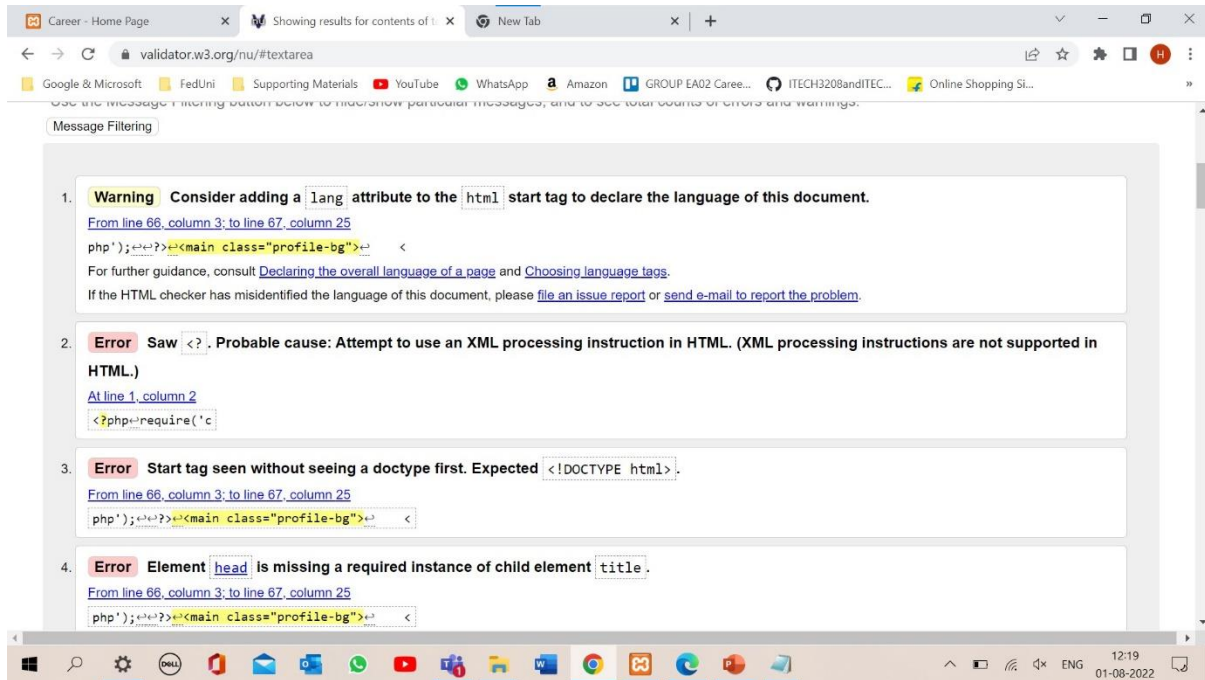

About Us Page

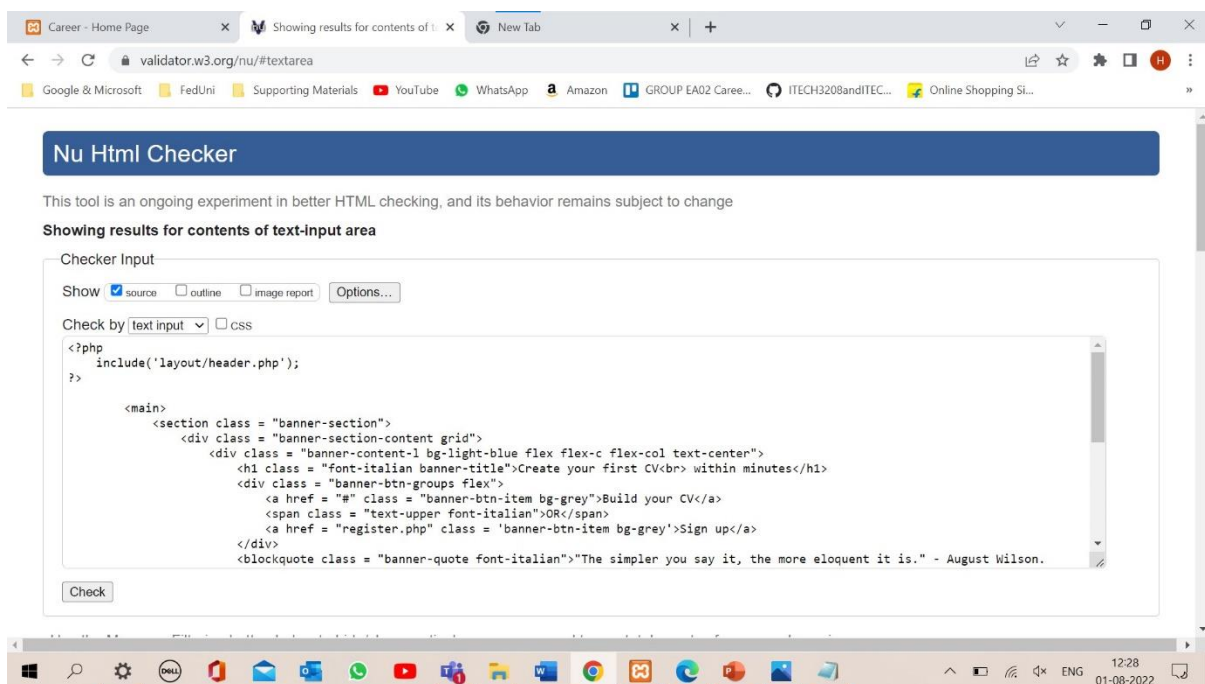

Below screenshots is all about testing of About Page of the website and the errors that has been identified. Currently, most of the errors have been solved.

Index Page

The screenshots below contain testing of Index page code and the out come of it using Validator.w3 web tool. Errors can be seen in the output screenshot, however, major errors have been solved.

Check by ☒ text input ☐ CSS

```
<?php
session_start();
if (isset($_SESSION['name']) && $_SESSION['name'] != null && $_SESSION['id'] != null) {
} else {
    header('location:login.php');
}

require('connection.php');
if (isset($_GET['delete_cv']) && $_GET['delete_cv'] != null) {

    $delete_id = $_GET['delete_cv'];

    $sql = "DELETE FROM cv WHERE id = " . $delete_id . " ";
```

Check

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.
